For effective correction of the
'malposition of the big toe' – bunion

HALLUX VALGUS

BUNION AID SPLINT

WITH
FLEXIBLE
HINGE

The problem
Painful bunion

The solution
Bunion Aid Splint

... while
maintaining mobility!

Choose the original, the Hallufix® Bunion Aid Splint

The Hallufix® Bunion Aid Splint can be worn in comfortable and wide shoes.

The Hallufix® Bunion Aid Splint is easy to put on and can be worn on both sides.

Pain relief and correction

The internationally patented Hallufix® Bunion Aid Splint has been developed by the Fraunhofer Institut and orthopedists to ease pain and correct big toe malpositioning (bunion).

Preventive and post-operative

The Bunion Aid Splint can be applied preventively in cases of mild to moderate bunions to counteract and avoid further progression of big toe malpositioning. This has been demonstrated by numerous studies. Following a Hallux Valgus operation, the splint helps to stabilize the corrected alignment and shortens the rehabilitation phase.

Special advantages

The Hallufix® Bunion Aid Splint can be worn during the day compared to rigid night splints and therefore corrects the malposition of the big toe faster and more effectively.

*for effective correction of the
'malposition of the big toe' – bunion*

The **Hallufix®** Bunion Aid Splint is the original international patented orthosis against the common condition of **Hallux valgus**, a deformity of the big toe, and was developed in cooperation with the Fraunhofer Institute and orthopaedists to correct the deformity of the big toe Malpositioning.

Hallux valgus (bunion) : a common condition

Hallux valgus is a deformity of the joint connecting the big toe and the foot, resulting in a misalignment of the big toe. Frequently, there is also swelling of the bunion on the inside of the foot. Hallux valgus is a common condition which frequently troubles many women even at a young age. More than 20% of all women worldwide suffer from this malposition of the big toe which can cause intense pain and severely limit the movement of the foot. At first, the deformity is viewed as merely a cosmetic problem, whereas the painful symptoms due to the developing arthritis frequently occur only in later years. **Hallufix® Bunion Aid Splint** helps and avoids further progression of this condition.

Recommendation - use for prevention

The **Hallufix® Bunion Aid Splint** should be used as a preventive measure in the case of mild to moderate bunions. This can delay worsening of the deformity of the big toe. The results to a research performed by the orthopaedist Professor Dr. Klaus A. Milachowski, Munich, confirm that the **Hallufix® Splint** orthosis is an effective device to improve incorrect foot stresses in cases of mild to moderate hallux valgus deformity that has yet become rigid. Following Hallux valgus surgery the **Hallufix® Splint** helps secure the results and shorten rehab time.

Hallufix®-Bunion Aid Splint - the mobile solution

In principle, the toe is returned to its natural position by means of the **Hallufix® Splint** and maintained there. The **Hallufix® Splint** corrects the deformity of the big toes and steadies the transverse arch with a bandage. The **Hallufix® Splint** combines the corrective function of a night splint and the supporting function of an arch support for the metatarsal arch in a single product. At the same time the adjustable **Hallufix® Splint**, due to its movable hinge, can be worn in any wide & comfortable shoes, during the day, in contrast to rigid night splints that can only be used when the foot is resting. In this way the dynamic **Hallufix® Splint**, with its patented splint system supports range of motion which effectively strengthens the surrounding muscles thereby resulting in a faster and long-term correction.

Hallux Valgus **without**
Hallufix® Splint

Intermetatarsal angle : 16°
Hallux Valgus angle : 40°

Hallufix®-Bunion Aid

- fits smoothly in comfortable & wide shoes
- supports the foot with every step
- Keeps your foot mobile
- **Protects the bunion without side effects**
- Corrects the malposition of the big toe
- Preventive and post operative
- Reduces the risk of arthritis
- Shortens rehab time

Hallux Valgus **with**
Hallufix® Splint

Intermetatarsal angle : 10°
Hallux Valgus angle : 19°

Hallufix

INNOVATIVE ORTHOTIC SOLUTIONS

MADE IN GERMANY

• Area of use

Hallux Valgus (Bunion)

• Mode of action

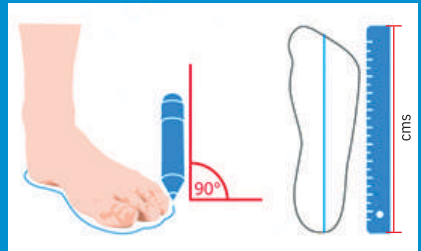

- Corrects the malposition of the big toe
- Preventive and post-operative
- Shortens rehab time
- Reduces the risk of arthritis
- Keeps your foot mobile
- Fits smoothly in comfortable and wide shoes

The Hallufix® Bunion Aid Splint is available in three different sizes:

MRP : 3831 /- pc.

 size	S	M	L
cms	≤ 22.4	22.4-26.2	25.8-29
EU	< 36	36 - 42	41 - 46
US Female	4 - 6	6 - 10	10 - 13
UK Female	< 3 ^{1/2}	3 ^{1/2} - 7 ^{1/2}	7 - 11
